

Cody Problem 41. Cell joiner

You are given a cell array of strings and a string delimiter. You need to produce one string which is composed of each string from the cell array separated by the delimiter.

For example, this input

```
% in_cell = {'Lorem', 'ipsum', 'dolor', 'sit', 'amet', 'consectetur'};  
% delim = ' ';
```

Scratch Pad

```
in_cell = {'Lorem', 'ipsum', 'dolor', 'sit', 'amet', 'consectetur'};  
delim = ' ';
```

```
cellstr_joiner(in_cell, delim)
```

```
ans =  
'Lorem ipsum dolor sit amet consectetur'
```

Solution

```
function out_str = cellstr_joiner(in_cell, delim)  
    out_str = strjoin(in_cell, delim);  
end
```
